

Six Sigma Black Belt Project Online On Demand

Each six sigma black belt participant must complete a project in order to meet the requirements for earning the Black Belt. The project must demonstrate the correct application of appropriate tools and show a tangible benefit to the host organization or a customer of the host organization. There is no minimum dollar amount, however trivial projects will not be accepted.

The steps that must be followed are listed below.

1. Review the project information found on the secure course website.
2. Complete the project charter form and submit to IIE electronically (laft@iienet.org.) This will be reviewed, critiqued, and when appropriate, approved by IIE. This may require multiple drafts.
3. Have the project champion also sign off on the project charter.
4. Complete the project. It is strongly encouraged that progress reports be submitted electronically as each milestone is reached.
5. Submit a draft of the project electronically to IIE. This will be reviewed, critiqued, and when appropriate, approved by IIE. This may require multiple drafts.
6. After IIE approves submit a letter of approval from the project champion.

After all the steps have been completed the project will stand approved.

Projects must be completed within one calendar year after the completion of the six sigma black belt exam.

The IIE SSBB is valid for a period of three years from the date of issue. In order to renew simply contact IIE and request renewal. Another certificate will be sent. (This process permits IIE to maintain a current contact point for you. Many organizations check references of current and prospective employees. Prior to responding to any such request IIE will check with you to determine if this is a valid request prior to validating your black belt credential.)
